# Oghogho Paul Orieno

Frontend Engineer · React · TypeScript · Next.js

Nigeria · Open to relocation worldwide · +234 802 830 6270 · oghoghoorieno@gmail.com
· Portfolio · GitHub · LinkedIn

## PROFILE

Frontend engineer with 2+ years of production experience building React, TypeScript, and Next.js applications across two live products, now extending into backend development. Currently the sole frontend engineer on a Next.js learning management system and a subscription-gated content-discovery app, while also maintaining a live consumer gifting platform. Comfortable owning work end-to-end — Figma to production — including access-control systems, deployment, and debugging real user-facing issues.

## TECHNICAL SKILLS

**Languages** TypeScript, JavaScript (ES6+), HTML5, CSS3

**Frameworks** React, Next.js (App Router), Tailwind CSS

**Backend** Node.js, Express (in progress — TS Academy Backend Development program)

**Tooling** Git, GitHub Actions, Vite, pnpm, Firebase, Figma, Webflow, Linux/CLI basics

## EXPERIENCE

### Frontend Engineer — iQubeLabs

**Oct 2025 — Present**

*Remote · Next.js, React, TypeScript, Tailwind CSS*

- Frontend engineer across two products at iQubeLabs: iQube.ox, a Next.js LMS, and iLike, a React content-discovery app.
- On iQube.ox: shipped the full Settings module (5 tabs — Profile, Account, Notifications, Appearance, Billing) and a Progress dashboard with KPI cards, an activity chart, and skill/achievement tracking, from Figma to production.
- Rebuilt the entire auth flow (login, signup, password reset, email confirmation) pixel-accurate to Figma using React Hook Form + Zod, resolving structural and merge conflicts along the way.
- Currently leading frontend build of the Work Groups feature — modal flows, role-based panels, multi-step wizards — translating a 60+ screen Figma spec into production React components.
- On iLike: designed and shipped a subscription/plan-gating system (guard component, interaction-level access control, legacy-user grandfathering) governing free vs. paid access across the app.
- Led a systematic dark-mode rollout across 10+ components on iLike, and built landing page UI (SVG animation, scroll-triggered components, accordion cards) with a glassmorphism design system.
- Diagnosed and resolved a CI/CD deployment hang; manage feature-branch → staging → main git workflows coordinated with the DevOps engineer.

### Frontend Engineer — 85gifts

**Jan 2025 — Present**

*Remote · React, Tailwind CSS, Firebase*

- Build and maintain the customer-facing frontend for 85gifts.com, a live consumer gifting platform, working directly with media and content teams as the product direction evolves.
- Provided UI/UX testing and improvement recommendations for Omniflow85, drawing on frontend engineering practices from iQubeLabs to flag usability issues and interface inconsistencies.

### Independent Engineer — Chatter (in progress)

**Sep 2023 — Present**

*React, TypeScript, Firebase*

- Building Chatter, a full-stack blogging platform, with Firebase authentication, real-time analytics, and media uploads.
- Designed a reusable UI component library (Avatar, ProfileCard, etc.) to enforce design consistency across the app.
- Owning architecture, implementation, and deployment end-to-end.

## EDUCATION & TRAINING

### Backend Development Program — TS Academy

**May 2026 — Present**

*In progress · Node.js, Express, APIs, databases, server-side architecture (expected completion Dec 2026)*

**Frontend Engineering Programme — AltSchool Africa** **Sep 2023 — Aug 2024**
*Intensive one-year programme: React, TypeScript, modern web development, software engineering practices*

**Leadership Programme (Harvard Collaboration) — Aspire Institute** **Dec 2024 — Mar 2025**
*Alumni · Global change-maker network for leadership and social impact*

**Bachelor's Degree — Delta State University, Nigeria** **2016 — 2020**

## RECOGNITION

- AltSchool Africa Community Champion (2023 — Present); Top Contributor 2024 — recognised for active engagement and peer mentorship across the Slack community.
